C2-L3 lab: Lakehouse, endpoint and warehouse side by side

Platform: Fabric trial workspace

Run this in a Fabric trial workspace. You create a lakehouse and a warehouse, write one table with Spark, read it through the endpoint, and see a write fail there.

1. In your trial workspace, create a lakehouse named `lh_research`.
2. Open a new notebook attached to `lh_research`. Run: `spark.createDataFrame([("W01", 120.0, 400.0), ("W02", 0.0, 0.0)], "wave_id STRING, weighted_reach DOUBLE, weighted_base DOUBLE").write.mode("overwrite").saveAsTable("nat_metrics")`.
3. Switch the lakehouse view to its SQL analytics endpoint. Wait for `nat_metrics` to appear. Note how long it takes.
4. Open a new SQL query on the endpoint and create the `dbo.v_wave_reach` view from exercise 4. Query it. Wave W02 returns NULL.
5. In the same query window, run `UPDATE dbo.nat_metrics SET weighted_reach = 0 WHERE wave_id = 'W01';` and read the error message.
6. Create a warehouse named `wh_finance`. In a new query, run `SELECT * FROM lh_research.dbo.nat_metrics;`. It returns the rows without a copy.
7. Write down what you saw in each step. Compare it with the recap card.
